√ ggplot2 3.4.2

                    √ tibble
                                  3.2.1
✓ lubridate 1.9.2
                      √ tidyr
                                  1.3.0
                                                       — tidyverse conflicts() —
√ purrr
            1.0.1
                      - Conflicts -
X dplyr::filter() masks stats::filter()
X dplyr::lag()
                  masks stats::lag()
i Use the 2]8;;http://conflicted.r-lib.org/2conflicted package2]8;;2 to force all conflicts to become errors
```

- If you find an error in the above step, install tidyverse first.
- Notice the difference between these three lines

```
y <- 10
[1] 10
                                                                                                                        Hide
y <- -10
[1] -10
                                                                                                                        Hide
y < - 10
[1] FALSE
                                                                                                                        Hide
У
[1] -10
```

Tidyverse takes advantage of logic operators

| [1] TRUE | |
|---|------|
| | Hide |
| 7 * 2 > 100 # False | |
| [1] FALSE | |
| | Hide |
| 9 < 9 #False | |
| [1] FALSE | |
| | Hide |
| <pre># >=, <= greater than or equal to, and less than or equal to 5 >= 3 # True</pre> | |
| [1] TRUE | |
| | Hide |
| (7 * 2) >= 100 # False | |
| [1] FALSE | |
| | Hide |
| 9 <= 9 # True | |
| [1] TRUE | |
| | Hide |

```
# == is "is equal to?"
10 == 2 * 5 # True
[1] TRUE
                                                                                                                          Hide
7 == 14 / 3 # False
[1] FALSE
                                                                                                                          Hide
TRUE == TRUE # True
[1] TRUE
                                                                                                                          Hide
FALSE == FALSE # True
[1] TRUE
                                                                                                                          Hide
TRUE == FALSE # False
[1] FALSE
```

Be careful of precision errors

```
sqrt(2) == 1.414214 # False
 [1] FALSE
                                                                                                               Hide
 pi == 3.14159265358979 # False
 [1] FALSE
>, <, <=, >=, == are also vectorized functions
                                                                                                               Hide
 c(5, 6) <= c(9, 12)
 [1] TRUE TRUE
                                                                                                               Hide
 c(TRUE, 5 * 8) \leftarrow c(FALSE, 40)
 [1] FALSE TRUE
                                                                                                               Hide
 5 == c(5, 6)
 [1] TRUE FALSE
```

Comparing NA values

```
Hide
5 == NA # = NA, not FALSE #notice the caution arrow on next to the line number
[1] NA
                                                                                                                          Hide
NA == NA # = NA, not TRUE

Loading in a data set in Tidyverse

- In Tidyverse use read_filetype("path/to/file.filetype")
- To read in a tsv we use

Hide

Hide

```
?read_tsv
dat.football <- read_tsv(file = "https://raw.githubusercontent.com/ada-lovecraft/ProcessingSketches/master/Bits%20and%20Piec
es/Football_Stuff/data/nfl-salaries.tsv")</pre>
```

```
Rows: 1501 Columns: 6— Column specification

Delimiter: "\t"

chr (3): PlayerName, Position, Team

dbl (3): Salary, NextSalary, SalaryCap

i Use `spec()` to retrieve the full column specification for this data.

i Specify the column types or set `show_col_types = FALSE` to quiet this message.
```

• View the top portion of the data to get an idea of what it looks like

Hide

Basic Functions in Tidyverse

- Tidyverse uses "verbs" as function names to describe what it is doing to the data
- · Let's look at a few of these "verbs"
 - Filter

```
dat.football %>%
  filter(Team == "Denver Broncos")
```

| PlayerName <chr></chr> | Position <chr></chr> | Salary <dbl></dbl> | NextSalary <dbl></dbl> | SalaryCap <dbl></dbl> | |
